# PRESCRIBER INFORMATION

1

## RYBELSUS<sup>®</sup>

Our suspension is compounded exclusively with Rybelsus<sup>®</sup>, an FDA-approved tablet. This commitment to transparent and responsibly-sourced ingredients helps us maintain our devotion to **Compounding with Integrity.**

2

## SUSPENSION

The base used in our suspension is engineered to handle molecules like semaglutide for sublingual administration. This anhydrous base allows for a **beyond-use date of 90 days** at room temperature.

3

## SUBLINGUAL

The emulsion behavior in the saliva enhances solubility and dispersion. Its permeation-enhancing effect works through **mucoadhesion**, increasing contact time with the sublingual mucosa.

4

## DIRECTIONS

Brush teeth before administration and rinse with warm water, shake the vial well, and administer the dose. Hold under the tongue for **2 minutes**, then swallow. Do not eat or drink for 30 minutes.

5

## INSIGHTS

PCCA consultants have noted **no instances of GI effects** requiring dose reduction or discontinuation with a daily 1.5 mg sublingual dose. They have also observed consistent weight loss of **one to two pounds** per week.

6

## MONITORING

Careful evaluation and monitoring of side effects is suggested for dosing beyond 1.5 mg. Monitoring parameters and potential side effects for patients starting semaglutide are the **same for any dosage form.**
